FREE CHEAT SHEET

15 Visual Codes: turn any topic into a great-looking visual.

Type your topic, pick a shape, pick a code, then copy and paste it into ChatGPT or Gemini. The code sets the look.

1. TOPIC
What you want to explain, like "how vaccines work".

2. SHAPE
Square, vertical, wide or phone. Page 2 shows which to use.

3. CODE
Pick one of the 15 below. Each one gives a different look.

```
Create a vertical 2:3 image: /blueprint how vaccines work
```

That's the whole line. Swap the shape, the code and the topic.

/blueprint
Systems with many parts

/roadmap
Steps over time

/handwritten
Notes that feel human

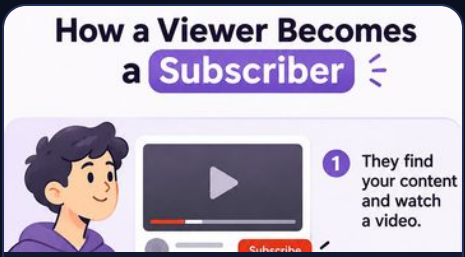

/decision-matrix
Comparing options

/flowchart
Yes or no logic

/infographic
Stats at a glance

/canvas
Brainstorming with sticky notes

/layers
Ideas that stack and build

/cycle
Loops that repeat

`/diagram`
Labeled parts of one thing

`/sketchnotes`
Summing up a talk or video

`/iceberg`
Hidden causes under a problem

`/exploded-view`
How the pieces fit

`/tree`
Topics that branch out

`/timeline`
History and dates

Pick your shape

Square 1:1
Feeds and posts

Vertical 2:3
Pinterest, blogs, slides

Wide 16:9
YouTube and thumbnails

Phone 9:16
Shorts, Reels, TikTok

Quick tips

- **Be specific with your topic.** "How a YouTube channel grows" beats "YouTube".
- **Try the same topic with two codes.** A blueprint and a roadmap can tell the same story very differently.
- **Add your own touch.** Mention your audience, brand colors or a headline to make it yours.
- **Want more control?** The free page has a longer version of every code you can use instead.

Use it free, any time:
lon-15-visual-codes.logicaldrive.chatgpt.site picks the shape and writes the line for you.
